

Can more than one device access the Internet at the same time via a cable modem?

Last Modified on 11/26/2024 3:59 pm EST

Yes, a wireless router or a Whole Home Wi-Fi system connects multiple devices online at the same time. For optimal performance and reliability while connecting multiple devices we recommend a minimum of 250M tier of Internet service. To learn more about SECV's Plume Whole-Home W-Fi system visit our [website](#).
