

# How will my HDTV set handle Standard Definition TV programs?

Last Modified on 11/27/2024 2:43 pm EST

The majority of HDTV sets can display a Standard Definition (480i) signal. If bars appear, you can select the Settings button on your TV's remote control twice to access the HDTV settings. When the menu displays select the 480i Stretch setting, which will stretch the 4:3 program to fill the entire screen area.
