

Will Plume work in a home with thick walls?

Last Modified on 04/01/2021 1:39 pm EDT

Yes. If you are having trouble getting Wi-Fi when you are not in the same room as your wireless router, several Plume Pods together in a system will enable you to get Wi-Fi coverage throughout your home. Because thicker walls make it more difficult for Wi-Fi signals to get through them, you may need more Plume Pods to cover your home.
