

What is Plume Guard?

Last Modified on 04/01/2021 1:42 pm EDT

Plume Guard offers real-time threat protection against emerging cyber threats. Guard is included with your Plume subscription.

Online Protection

Plume filters out suspicious content as your devices connect to the Internet, providing you with real-time threat protection against crypto-mining, ransomware, malware, viruses, botnets, phishing attacks, and more.

Advanced IoT Protection

Plume identifies all your connected devices and continuously monitors them for suspicious activity. If a device is compromised, Plume quarantines the device, preventing the threat from spreading to the rest of your connected devices.

Adblocking

Plume blocks the ad content coming from known ad servers, significantly improving your browsing experience.
